

Daily Mental Health Check in

A daily n8n workflow that helps people notice how they feel and receive a personal response.

n8n - SDG 3: Good Health and Well being

Rayna Jong and Evaldas Pocius

The problem and user group

THE PROBLEM

People often continue with their day without noticing how stressed or tired they feel.

A short daily pause can make those feelings easier to notice before they become harder to manage.

USER GROUP

Anyone who wants a simple habit for checking in with their mental wellbeing.

IF THE GROUP CHANGED

For younger students, we would simplify the language, consider consent and connect support to a school counsellor or trusted adult.

WHY THIS APPROACH WORKS

The solution fits a daily routine

Daily Check-in

Take a moment to check in with yourself. Rate each from 1 to 10.

Mood (1-10) *

1 = very low, 10 = great

Stress (1-10) *

1 = calm, 10 = very stressed

Energy (1-10) *

1 = drained, 10 = energized

Main concern *

Select an option ...

Anything you want to add? (optional)

Submit

Form automated with  n8n

WHAT THE USER DOES

Rates mood, stress and energy from 1 to 10

Chooses the main concern

Adds a note only when they want to share more

The form takes about one minute, so it asks for enough context without demanding too much effort.

DEMO RESULT

The response helps the user feel seen

Today's affirmation: The good news you received matters and you're letting it shape your day.

You sound upbeat and energized, and it's thoughtful that you're celebrating positives while staying mindful about money; that balance can help steady decisions.

Small action: Take two minutes to write one financial win from today and one tiny next step you can do this week.

AFFIRMATION

Starts with support

REFLECTION

Responds to what the user shared

SMALL ACTION

Suggests one realistic next step

The complete n8n workflow

The nodes and why we chose them

Schedule and Email

Sends the form link every day at 18:00

Form Trigger

Collects the scores, concern and optional note

Edit Fields

Gives the submitted data clear field names and adds the date

AI Chain and OpenAI

Uses the answers to create a personal response

IF Node

Checks whether the user may need support information

Google Sheets

Stores each check in so changes can be reviewed over time

PROMPT AND OUTPUT

What we provide to the AI

FORM DATA

Mood score

Stress score

Energy score

Main concern

Optional note

PROMPT INSTRUCTIONS

We asked the n8n AI Assistant to keep the existing nodes and add a daily email reminder, organise and save the form data, check for very low mood or high stress, add support resources when needed, and make sure the user always receives their response.

We asked the AI to use the user's mood, stress, energy, concern and note to create a response with an affirmation, a warm reflection and one small action. The response had to be under 80 words, non clinical and supportive.

Expected format: affirmation, reflection and small action

Testing the workflow

FORM SUBMITTED

AI RESPONSE CREATED

SHEET UPDATED

EMAIL SENT

Green connections show the path used during the test.

Safety, privacy and AI for Good

AI LIMITS

The response may misunderstand a short note. It must not diagnose the user or replace professional help.

PRIVATE DATA

Mood scores and notes are sensitive. Access to the workflow, email account and Google Sheet must stay protected.

SUPPORT ROUTE

Very low mood or very high stress adds 113 Zelfmoordpreventie and GP information before the message is sent.

The project uses AI for Good by making a daily moment of self awareness feel personal while keeping human support visible.

Thank you!
